

be driven.

ABSTRACT

A hydraulic pump (100) driven in interlocked motion with a rear wheel, a front wheel driving hydraulic motor (101) connected to the hydraulic pump (100) and placed in the vicinity of a front wheel (106), and a pressurizing means (102) interposed between the front wheel driving hydraulic motor (101) and the hydraulic pump (100) are provided, with the hydraulic pump (100), the front wheel driving hydraulic motor (101), and the pressurizing means (102) constituting a closed hydraulic circuit (103).
